Lipid screening is a key component of risk assessment for the primary prevention of atherosclerotic cardiovascular disease (ASCVD). More than 1/4 of Canadians with high cholesterol do not know that they have unhealthy lipid levels. To support your practice the CCS has released:

- **Refreshed Dyslipidemia Guidelines and Resources page**: [here](https://ccs.ca) on ccs.ca to support risk screening, assessment, and management.
- **Updated Framingham Risk Score Calculator**: new to the iCCS app and [here](https://ccs.ca).
- **New CCS webpage and resources for people at risk of ASCVD**: [here](https://ccs.ca).

Watch for accredited webinars, interactive case studies, podcasts, and an Ask the Expert series in the coming months.

- **Read the CCS Guidelines for the Management of Dyslipidemia for the Prevention of Cardiovascular Disease in Adults**
- **Read the CCS/CPCA CPU on Detection, Evaluation, and Management of Dyslipidemia in Children and Adolescents**
- **Read the CCS Position Statement on Familial Hypercholesterolemia: Update 2018**
